

Secure Release

sepialine.com/secure

Protect sensitive information and reduce waste.

With Secure Release from Argos your documents are safe and sound until you retrieve them at the printer. Keep your important documents away from prying eyes, and eliminate the piles of unclaimed print jobs that accumulate in your paper trays. Argos Secure Release makes sure that print jobs are wanted and destined their owners, every time.

Require users to claim their documents at the print device

Eliminate wasteful unclaimed print jobs

Prevent documents from sitting in public view

Available as embedded solution on compatible devices

Security and efficiency for your documents.

Argos Secure Release closes the print floodgates by keeping print jobs in a server-based holding queue, then releases them from your MFP's front panel. The result is less waste, increased security, and lower printing costs.

And because Argos Secure Release runs right on your MFP front panel, there's no extra hardware or terminals to add.

Argos Secure Release even helps companies meet privacy compliance rules, such as Sarbanes-Oxley, HIPAA, and more.

Keep documents private

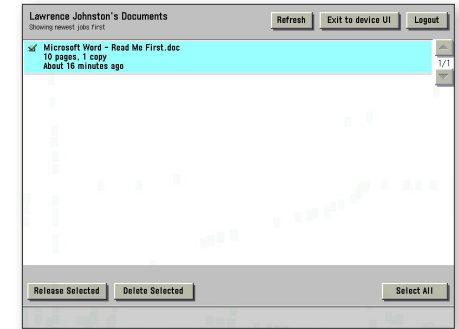

Printing sensitive documents is risky; they sit in the printer tray for anyone to see. Get distracted and they can fall into the wrong hands. Argos Secure Release holds confidential print jobs until you're ready to receive them at the printer so you, and only you, ever see them.

Print with purpose

Eliminate the reams of unclaimed, wasted pages that sit in your paper tray, unclaimed and uncollected until someone finally cleans up. With Argos Secure Release, print jobs are held until users claim them at the MFP, so every print job must be truly wanted.

Embedded technology

Argos Secure Release runs right on your MFP front panel, so there's no extra hardware or terminals to add.

FEATURES

- Print jobs are held at the Argos Secure Release server until claimed by their owners
- Embedded release clients for popular Multi-Function Peripherals (MFPs)
- Single sign-on works for authentication and job release
- Log in via numeric PIN code and/or proximity card (on compatible devices)

REQUIREMENTS

- Argos 7.2.1 or higher
- Argos OnBoard
- Canon imageRUNNER with SDK 3.0 or higher, or compatible Xerox device

Securing your print workflow

Argos Secure Release changes your print workflow to hold each job until its owner is present at the printer. At the MFP, you log in on the front panel via PIN code or card, choose the documents you want to print, then release them.
